## Professional Summary

Data Scientist student completing a Master of Science in Data Science (expected Q3 2026), with hands-on experience in Generative AI, Large Language Models, and advanced machine learning algorithms. Currently working as a Data Science Intern in Gen AI, building complex workflows and document ingestion pipelines. Seeking a Junior Data Scientist position to turn complexity into opportunity, bringing a strong learning mindset, curiosity, and the ability to collaborate in cross functional teams to drive innovation and create impactful data driven solutions.

## Work Experience

**Data Science Intern - Gen AI** – Leithà S.r.l. | (Gruppo Unipol) *Feb 2026 – Present | Milan, Italy*

- Creation of POCs for document ingestion pipelines: OCR → LLM → structured extraction and development of complex prompts (multi-prompt, agentic, tool-use) and performance evaluation
- Use of frameworks such as LangChain, LangGraph, and PydanticAI to orchestrate workflows, agents and use of NotionAI to improve internal knowledge base and experimentation with machine learning & AI in the cloud (Google, AWS, Azure)

**Market Data Collector** – Modus S.r.l. *Sep 2023 – Feb 2024 | Florence, Italy*

- Conducted 300+ quantitative and qualitative interviews in retail environments, gathering primary market research data.

**Shop Assistant** – Liberty recycling training & development *Jun 2019 – Jul 2019 | Dublin, Ireland*

- Managed point-of-sale operations, inventory, and cash handling in a high-volume retail setting.

## Education

**Università degli Studi di Padova** – Padova, Italy *Sep 2024 - Present*

*Master of Science in Data Science (English)*

**Università degli Studi di Firenze** – Florence, Italy *Sep 2021 - Jul 2024*

*Bachelor of Science in Statistics (Italian)*

Final Grade: 94/110

## Skills

**Machine Learning & AI:** Deep Learning, Generative AI, LLM, Prompt Engineering, Classification, Clustering, CNN, RNN, Reinforcement Learning, NLP, Machine Learning

**Frameworks & Tools:** TensorFlow, PyTorch, Keras, Apache Spark, Scikit-Learn, XGBoost, LangChain, LangGraph, PydanticAI, Object Detection, Time-Series Forecasting, Agentic Workflows

**Cloud & Visualization:** Cloud Computing, Google Cloud, AWS, Azure, Tableau, Matplotlib, Seaborn, Power BI, Git, NotionAI, OCR

**Programming & Data Analysis:** Python, R, SQL, Stata, Inferential Statistics

## Projects

### Pokémon detection model comparison

- Conducted a comparative study of YOLOv11s, RT-DETR, and Faster R-CNN models for real-time object detection on a balanced 9-class dataset.

### Image classification with custom-built CNN

- Built an end-to-end image classification pipeline by implementing a convolutional neural network from scratch using PyTorch.
- Successfully classified images into 20 distinct categories, achieving 87% accuracy.

### Weather time-series forecasting using deep learning

- Implemented a robust PyTorch Seq2Seq GRU model for multivariate time-series forecasting, predicting 76 weather variables over 30 future steps from 90 historical steps.

### Continuous optimization for maximum clique problem

- Solved the maximum clique problem by implementing continuous optimization algorithms, namely projected gradient descent and Frank-Wolfe, in Python. Achieved a 30% reduction in execution time on DIMACS datasets.

## Languages

Italian (Native), English (Advanced - C1)
